

# WORKS AS SMART AS YOU DO.

## SMART Pro/R Service Tools

# SMART Pro/R SERVICE TOOLS

**SAVE STEPS, SAVE TIME, SAVE DATA.**

Now several of your common diagnostic/service problems for HVAC/R can be solved with one ingenious product: the SMART Pro/R Service Tools from Sporlan.

The image displays four SMART Pro/R Service Tools, which are handheld diagnostic devices with black bodies and colored caps (red, blue, and black). Each tool has a long, thin black probe extending from the top. The tools are arranged in a cluster, with callout bubbles pointing to various features. The callout bubbles contain the following text:

- Automatically calculates Superheat and Subcooling**
- Pressures and temperatures displayed **directly on compatible mobile devices** via free app**
- Extended Bluetooth Range**
- Sensors operate at **-40°F****
- App connects **10+ wireless sensors** for multi-circuit systems**
- Temperature Sensor **Mounts to Any Line Size****

# READ IT. RECORD IT. SEND IT.

**SMART Pro/R Service Tools were developed to make diagnostic readings faster and simpler. But the best part of the products might be the way they calculate and store the recorded data. And, they are hose-free and wire-free.**

With SMART Pro/R Tools, you no longer have to write down the system data and then manually crunch those numbers yourself.

**1** When the pressure and temperature readings appear on your phone screen, the calculations are instantly done for you, including the key Superheat and Subcooling parameters.

**2** Create notes with live data to track your work and show proof of work to customers.

Generate custom ".pdf" reports, and share ".csv" data files and reports from within the app.

**3** Being able to easily compile and access digitized information over time will simplify any analytical processes later, such as monitoring system efficiency and tracking usage trends.

The ability to record and transmit data also expedites service call verification or provides proof of work.

## HOW IT WORKS.

The hardware couldn't be simpler: wireless pressure sensors (low and high) replace traditional manifold gauges, plus wireless temperature sensors that mount to any line size.

Just attach the sensors to the refrigeration unit and activate the app screen. The pressures and temperatures will be displayed right on your smart device. It's that quick.

Record data for reference or for proof of work.

- ▶ Simple, app-supported readings with hose-free connections
- ▶ Instant data calculations plus export and storage capabilities
- ▶ The added freedom to read and record data remotely
- ▶ An easy method for safeguarding system diagnoses
- ▶ A great way to save time and increase productivity

◀ Compatible with iPhone, iPad, iPod touch and Android. iOS 9.0 or newer / Android 4.4 or newer required.

## MORE FREEDOM AND FLEXIBILITY.

THINK OF HOW MUCH EASIER A SERVICE CALL IS WHEN YOU:

- ▶ Don't need to carry a lot of diagnostic equipment on-site
- ▶ Don't need to disconnect the hoses and risk losing refrigerant
- ▶ Don't have to worry about what type of refrigerant is being used (More than 115 refrigerants are available on the SMART Pro/R app)
- ▶ Don't need a second technician to help conduct readings and record data

## MAKE THE SMART Pro/R DECISION.

Talk to Sporlan today for more information on SMART Pro/R Service Tools. Just contact us at [sporlanonline.com](http://sporlanonline.com) or 636-239-1111 and see how our products work as smart as you do.
