

Proudly Made in the USA

Wohler Retrotec, Inc. proudly manufactures its blower door systems and digital manometers in our plant located in Everson, Washington USA. We use only high-quality components in the manufacture of our airtightness testing products, and all or virtually all the components used within our blower doors, duct testers, digital manometers, and accessories originate in the USA.

The Federal Trade Commission (FTC) has published rules establishing when a company may rightfully claim that its products are “Made in the USA.” Like you, we value products that are “Made in the USA.” All of Retrotec’s systems listed below are “Made in the USA.”

SKU/ Product Name / Model	
DM32 - Digital Manometer	Model 300 - Residential DuctTester System
DM2- Digital Manometer	Model 400 - Commercial DuctTester System
Model 5000 - Blower Door System	
Model 6000 - Blower Door System	

Retrotec is committed to doing what it can to help our country grow and prosper. One of the most important ways is to build our products in the USA employing Americans in the process. We are proud to be able to say, without exception, that all our products are assembled in the USA.

Retrotec provides well-paying jobs to hardworking Americans. These employment opportunities at Retrotecs facilities contribute to the economic vitality of that region.

We love being a part of building America, whether it’s the manufacturing of airtightness testing products used in the building of homes and office buildings or building the local economies of the regions in which we’re located. This is the vision our founders had for the company from the beginning. It’s the vision we’re seeing through to this day.

Sincerely,

Ben Walker & Darren Kennedy
